Taeon Haean National Park is located within Taeon County, and is known for its clear seas, unpolluted soils, coastal flora, tidal flats, coasts, and white sand.

First of all, we are heading to Baekhwasan. Baekhwasan Cloud Bridge is a bridge that allows you to enjoy the beautiful mountain and sea between two peaks at 250m above sea level. In particular, Taeon-gun explains that it is built in a location where you can see both the open Garolim Bay and the foot of Mt. On the way to the cloud bridge, you may see the Taeulam Hermitage, well-known for Rock-carved Standing Buddha Triad

The mud flat in western sea of South Korea is one of the 5 largest mud flats in the world. The gap between in/out of tide is huge, which makes Taeon's mud flat much more fertile than others. Especially after the tide's out, hidden black mud flat comes out, which is the most beautiful part of Taeon. You can find various marine creatures in the wetlands while the tide is out. If you'd like to experience this mud flat as it is, do not hesitate to choose mud flat activities. You can easily find people who are trying to catch various marine creatures such as shellfish, razor clams, small octopuses and small crabs on the mud flat. This activity is especially famous regionally for families because parents want to give a precious memory to their children.

Cheongsan Arboretum is home to over 200 different kinds of wildflowers, trees, and water plants such as lotuses and water lilies. Theme gardens and walking trails have over 600 types of trees. pened in 1990, the garden has the most water plants in th
